

LALVIN MSB™

Saccharomyces cerevisiae

Marlborough Sauvignon Blanc: Yeast to reveal varietal characters

DESCRIPTION

LALVIN MSB™ was isolated from the Marlborough region (New Zealand). LALVIN MSB™ was specifically selected from several isolates for its fermentation performance and ability to respect Sauvignon Blanc varietal character.

BENEFITS & RESULTS

Winery trials have consistently demonstrated that LALVIN MSB™ produces elegant and balanced Sauvignon Blanc wines with tropical notes, zesty grapefruit, spicy with lemon pith flavors and lovely fruit weight. This well-balanced fruity thiol production is accompanied with excellent mouthfeel perception in the wines fermented with LALVIN MSB™.

Wines fermented with LALVIN MSB™ show a well-balanced sensory profile between these different aroma families.

TROPICAL FRUITS

WHITE FRUITS

VEGETAL THIOLIC PERCEPTION

Aromas index based on Odor Activity Value • Sauvignon Blanc (Val de Loire, France)

Initial sugar content = 220 g/L • Initial YAN = 110 mg/L • TA = 6.28 g/L (TH₂) • pH = 3.18 - Free SO₂ < 5 mg/L • Total SO₂ - 22 mg/L

YSEO™
PROCESS
Research in collaboration
with Washington State University

YSEO™ signifies Yeast Security and Sensory Optimization, a unique Lallemand yeast production process to help overcome demanding fermentation conditions.

YSEO™ improves the reliability of alcoholic fermentation by improving yeast quality and performance and reduces the risk of sensory deviation even under difficult conditions. YSEO™ yeasts are 100% natural and non-GMO.

- PROPERTIES***
- *Saccharomyces cerevisiae*
 - Optimum fermentation temperature range: > 14 °C
 - Alcohol tolerance up to 14.5% v/v
 - Steady and moderate fermentation rate
 - Competitive ("Killer K2") factor active

- Medium relative nutritional requirement
- Low SO₂ production
- Low H₂S production
- Suggested varieties – Sauvignon Blanc - Chenin Blanc

**subject to fermentation conditions*

INSTRUCTIONS FOR OENOLOGICAL USE

A. Rehydration without yeast protector

Dosage rate: 20 to 40 g/hL

1. Rehydrate the yeast in 10 times its weight in water (temperature between 35 °C and 40 °C).
2. Resuspend the yeast by gently stirring and wait for 20 minutes.
3. Mix the rehydrated yeast with a little juice/must, gradually adjusting the yeast suspension temperature to within 5-10 °C of the juice/must temperature.
4. Inoculate into the must.

B. Rehydration with a yeast protector

In musts with high alcohol potential (> 13% v/v), with low turbidity (< 80 NTU) or other challenging conditions, the use of one of our GO-FERM™ products (wine yeast protector) during yeast rehydration is recommended. Follow rehydration instructions according to the selected GO-FERM™ product.

+ Notes:

The total rehydration time should not exceed 45 minutes. It is crucial that a clean container is used to rehydrate the yeast. Rehydration directly in must is generally not advisable. Ensure yeast nutrition is appropriately managed during fermentation.

PACKAGING AND STORAGE

- Available in 500 g
- Store in a cool dry place
- To be used once opened
